3dcoco Peat

Coconut peat is a 100% natural and organic material and especially in the last decades, it is preferred by gardeners, orchardists or flower-growers in the preparation of potting mixes.

The most important reason to be preferred is 3dcoco Peat's water retention ability. According to the researches, coconut peat increases water retention in the soil by 40% and decreases needs of water in the long-term. In addition, with its porous structure, it prevents compaction of the soil. In compact soils, plant root cannot reach air and nutrients efficiently causing withering of the plants by time. However, 3dcoco Peat enables plants to take up air and nutrients promoting plant growth. Thanks to this feature, 3dcoco Peat is a perfect product to be used in soil amendment. Especially in the areas where soil is hard and compact, 3dcoco Peat loose the stiff soil structure and help aeration of the soil.

3dcoco Peat

Areas of Usage

- Grass area under favor of water retention
- Gardens and parterre
- Harsh and compact soils
- Soil amendment
- Landscaping
- In soil of decoration plants
- In soil of plants, vegetables and fruits

Technical Specifications

EC	1.1
pH	6.1
Total Organic Content	85%
Total Humic + Fulvic Aside	7.9%

Properties of 3dcoco Peat

- Optimal pH for plants
- 100% organic
- High water retention
- Lets soil get air and nutrition with porous structure
- Optimal to be used in potting mixes
- Renewable source to be used
- Decreases watering needs and expenses
